

Let's dig a little bit into the **code**

```
<form
  class="dynamic-form"
  novalidate
  :id="id"
  :name="id"
  v-bind="formattedOptions"
  @submit.prevent="handleSubmit"
>
  <dynamic-input
    v-for="control in controls"
    :key="control.name"
    :control="control"
    :submitted="submitted"
    @change="valueChange"
    @blur="onBlur"
  />
</form>
```
